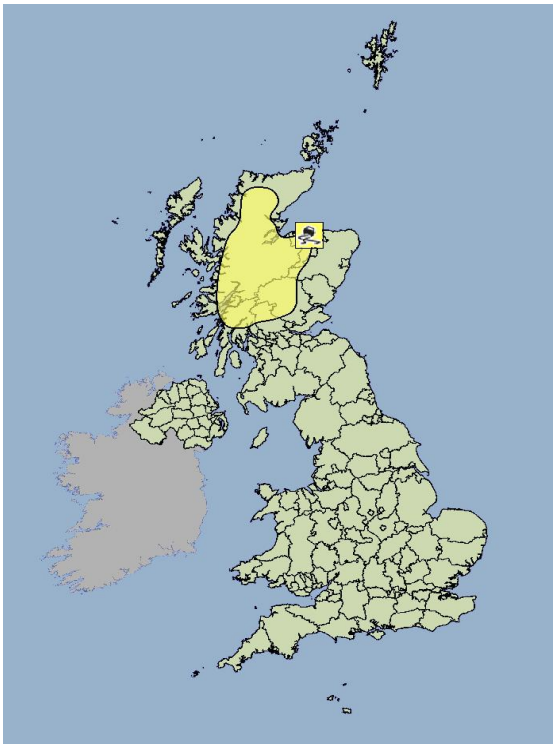
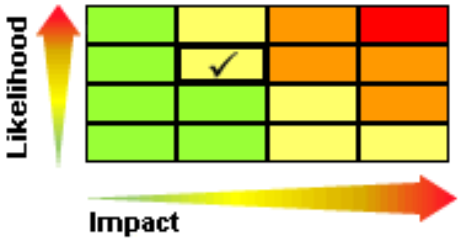
National Severe Weather Warning Service





Chief Forecasters Assessment
As frontal systems clear, we will see a colder airmass than for some time, crossing Scotland from the west. This will be bringing some mainly low-key wintry hazards, although being a showery set-up some places will stay dry, especially east of the mountains.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **20:00 on Thu, 16th Mar 2017** until **09:00 on Fri, 17th Mar 2017**

Icy patches will form across some northwestern areas of Scotland, initially over higher roads this evening but more generally overnight and at first on Friday. In addition blustery showers will turn progressively more wintry, with slight accumulations of snow, these mainly on hills above 200-300m.

This wintry combination, will bring tricky driving conditions, particularly for the higher-level roads.
